

Project Portfolio

Saipem Leighton Consortium (SLC)

Barrow Island WA

Start date: *August 2012*

Scope of Works: *Rigging Support, Rope Access Services, Design Manufacture and operation of temp access platforms*

Skills provided: *Riggers, Scaffolders, Rope Access personnel, Boilermakers, Fitters*

Scope:

The APS team based on Barrow Island are carrying out numerous essential tasks for the construction of the LNG Jetty on Barrow Island. Works carried out so far include;

- Heavy lift support
- Installation inspections and removal of temporary access equipment
- Installation and removal of construction aids used for the landing of the Pipe Rack and Roadway Modules
- Assisting the onsite survey team
- Setting up of the pipe work for welding
- Removal of interfering scaffolding
- Crane inspections and maintenance
- Marine assistance
- Training

One of the key aspects associated with the works being carried out on Barrow Island is working in a marine environment. APS have gained a key understanding of working in this environment which includes our ability to safely and efficiently work off and from the various types of marine equipment ranging from Derrick Lifting Barges, crane barges and work punts.
